

University of California, Berkeley

Productivity Services Suite

UC Berkeley spends an inordinate amount of time and money on productivity solutions—e-mail, calendar, and productivity and collaboration tools. By outsourcing the campus-wide provision, management, and operation of a proven, comprehensive suite of productivity solutions from a single vendor, the University would save money, increase efficiencies, and enhance collaboration among students, faculty, and staff.

VisionExcellence by reducing administrative costs, advancing an effective and efficient operating environment, and instilling a culture of continuous improvement. This project proposes to combine \$6 million in OE investment with \$13 million in outside funding and projects \$2.1 million in annual run-rate savings.TimelineThis effort will be implemented in two phases. Campus requirements review and vendor selection would be complete within three months of funding approval. Over the subsequent three months, the selected desktop software would be made available, and calendar and email migration undertaken. Campus-wide rollout of email would commence after eight months.LeadershipSponsor: Shelton Waggener, Associate Vice Chancellor and Chief Information Officer Sponsor: Paul Wright, Professor of Mechanical Engineering and Director, CITRIS Design Phase Initiative Manager: Lyle Nevels, CIO, Haas School of BusinessFor MoreComplete copies of the Information Technology Business Case as well as the Request for Resources and the	Summary	Thousands of staff-hours are spent each year researching and debating potential software purchases, levels of site license, and product options. The choices are numerous and often complex, and the tools chosen are not always the optimal ones. The lack of common office productivity software and collaboration tools has led to significant fragmentation, excessive cost, and productivity inefficiencies campus-wide.

This project will lower the per unit costs of email, calendar, and productivity and collaboration tools as a whole, enhance individual performance, and increase connectivity among faculty, students, and staff—and beyond. By implementing such a solution, the University can focus on the use of the tools and their expanding capabilities rather than on maintaining existing and often redundant systems. In addition to cost and time savings, the proposed productivity services solution will give the campus additional benefits that will be realized as they are used,
